

Pioneer Ridge

23 September 2102

Another nice Fall day. Way too nice to stay at home so I headed South to the Ridge. The temp was about 65 degrees and the leaves were beautiful.

Once again the setup was the ATS4, 84 ft wire up ~75ft at the far end with 3-30 ft radials, a ZM-2 tuner and LiFePO4 battery power. A buck/boost regulator was placed between the battery and the rig, fixing the rig's input voltage at 12V.
