

Pioneer Ridge 3 October 2012

On the spur of the moment I made a solo run to Pioneer Ridge this afternoon, and operated for about 2 1/2 hours. I set up in the primitive campground again. The ATS4 was on 20M and connected to my ATS4, EZKeyer, ZM-2, 84 foot end fed, and 3-33' radials. 20M was better today - OR it was the 84' wire and radials. Like my English ancestors say, "It works a treat." I even worked some DX, G4ELZ and UR5FA/MM.
